Application/Control Number: 10/633,066

Art Unit: 1743

Claim Rejections - 35 USC § 112

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-25 are not clear how the color former and the solvent-absorbing material are combined. Additionally, it is not clear if the metal ions are also part of the composition.

Claim 15 does not further limit claim 14 because other indicators, such as 3-methylcatechol, are not 1,2-dihydroxybenzene derivatives.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States..

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-10,13,17 and 24 are rejected under 35 U.S.C. 102(e,b) as being clearly anticipated by Winskowicz('544 and 891' respectively).

Winskowicz teaches a composition to determine if a golf ball has been submerged in water. The composition uses a polymer or paint as the absorbent material and water as the solvent for color forming compound. In columns 4-5 lines 60-28 respectively the claimed solvent absorbing material is taught. In column 5 lines 39+teach the colorimetric dyes. Column 8 line 40 teaches the use of zinc salicylate as a color indicator in a concentration of 1-5 wgt %. With respect to the claimed relative temperatures ,because the art reads on the claim it must inherently have the same properties.

Claims 1-10,13 and 17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Tanimoto.

Tanimoto teaches a composition to determine exposure to water. The composition uses a polymer or paint as the absorbent material and water as the solvent for color forming compound. The Office has read the taught latex (see column 4 line 28) on the claimed "organic rubbers". In column 3 lines 1-44 teaches the claimed dyes that have been read on the claimed color formers and the claimed zinc. With respect to the claimed relative temperatures ,because the art reads on the claim it must inherently have the same properties.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Application/Control Number: 10/633,066

Art Unit: 1743

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over by Winskowicz (USP 5,823,891 or 5,938,544).

See Winskowicz(USP 5,823,891 or 5,938,544) supra.

Winskowicz teaches in column 8 lines 40+ the use of zinc salicylate but is silent to the claimed zinc acetate. Winskowicz teaches the zinc salicylate in a concentration of between 1-5 wtg% that overlaps with the claimed overlapping range of 0.1-2.5 wtg%.

Art Unit: 1743

Zinc acetate is well known in the art as a source of zinc ions. Additionally, it would have been within the skill of the art to choose the overlapping claimed range of 1-2.5 wtg% zinc. The court decided In re Boesch (205 USPQ 215) that optimization of a result effective variable is ordinarily within the skill of the art. A result effective variable is one that has well known and predictable results.

The choice of an alternative source of zinc ions from a well known source, such as zinc acetate and the selection of the overlapping range of 1-2.5 wtg% zinc are all result effective variables. It would have been within the skill of the art to modify either Winskowicz and use zinc acetate as a source of zinc ions and select the range of 1-2.5 wtg% zinc as optimization of result effective variables.

With to the limitation that the indicator is reversible, because the limitation and the claimed source of the metal ions.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-25 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-2 and 1-21 of U.S. Patent No. 6,680,205 and 6,689,619 respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because both teach coating of golf balls with the claimed compositions.

Conclusion

This is a continuation of applicant's earlier Application No. 09/843,451. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Art Unit: 1743

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lyle A. Alexander whose telephone number is 571-272-1254. The examiner can normally be reached on Monday, Wednesday and Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill Warden can be reached on 571-272-1267. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
